AUTHOR INDEX *

Volume 1 (1981/1982)

Agrafiotis, G.K., A stochastic model for cell survival after irradiation, (3) 108–110
Ahn, B.H., A Gauss–Seidel iteration method for nonlinear variational inequality problems over rectangles, (3) 117–120
Ancona, M. and De Floriani, L., Computational algorithm for hierarchically structured project networks, (5) 170–176

Bachem, A., Johnson, E.L. and Schrader, R., A characterization of minimal valid inequalities for mixed integer programs, (2) 63–66
Bahl, H.C. and Zionts, S., A noniterative multiproduct multiperiod production planning method, (6) 219–221
Barthoidi, III, J.J., A good submatrix is hard to find, (5) 190–193
Bartholdi, III, J.J. and Platzman, L.K., An O(N)log(N) planar travelling salesman heuristic based on spacefilling curves, (4) 121–125
Beck, P.O., *see* Lasdon, L.S., (1) 6–9
Bell, P.C., The use of decomposition techniques for the analysis of open restricted queuing networks, (6) 230–235
Brennan, J.J., Minimal spanning trees and partial sorting, (3) 113–116
Bunn, D.W., An empirical Bayes procedure for the credit granting decision, (1) 10–12

Carlier, J. and Rinnooy Kan, A.H.G., Scheduling subject to nonrenewable-resource constraints, (2) 52–55
Chandrasekaran, R., The weighted euclidean 1-center problem, (3) 111–112
Chandrasekaran, R., Kabadi, S.N. and Murty, K.G., Some NP-complete problems in linear programming, (3) 101–104
Chang, G.J. and Nemhauser, G.L., R-domination on block graphs, (6) 214–218
Corley, H.W. and Sha, D.Y., Most vital links and nodes in weighted networks, (4) 157–160
Cornuéjols, G., Hartvigsen, D. and Pulleyblank, W., Packing subgraphs in a graph, (4) 139–143

Daniel, T.E. and Goldberg, H.M., A note on the economics of exhaustible resources under production capacity constraints, (4) 126–128
Dantzig, G.B., Reminiscences about the origins of linear programming, (2) 43–48
De Floriant, L., *see* Ancona, M., (5) 170–176
Derzko, N.A., *see* Sethi, S.P., (4) 148–152

Farber, M., Independent domination in chordal graphs, (4) 134–138
Feichtinger, G. Optimal pricing in a diffusion model with concave price-dependent market potential, (6) 236–240
Fishburn, P.C., Simplest cases of nth-degree stochastic dominance, (3) 89–90
Fuller, J.D., Schwartz, S.L. and Ziemba, W.T., Is energy self sufficiency a realistic goal for Canada?, (1) 2–5

Gattass, E.A., *see* Nemhauser, G.L., (1) 13–17
Goldberg, H.M., *see* Daniel, T.E., (4) 126–128
Greenberg, I., The effect of deception on optimal decisions, (4) 144–147
Grötschel, M. and Pulleyblank, W.R., Weakly bipartite graphs and the max-cut problem, (1) 23–27

Hamacher, H., An O($K \cdot n^4$) algorithm for finding the K best cuts in a network, (5) 186–189
Hartvigsen, D., *see* Cornuéjols, G., (4) 139–143
Hearn, D.W., The gap function of a convex program, (2) 67–71
Heath, D.C. and Maxwell, W.L., A note on the performance of limited entry queuing systems, (3) 91–95
Hsu, W.-L., The distance-domination numbers of trees, (3) 96–100

Johnson, E.L. and Padberg, M.W., A note on the knapsack problem with special ordered sets, (1) 18–22
Johnson, E.L., *see* Bachem, A., (2) 63–66
Jonker, R. and Volgenant, T., Identification of non-optimal arcs for the traveling salesman problem, (3) 85–88

Kabadi, N., *see* Chandrasekaran, R., (3) 101–104
Karp, R.M., Dynamic programming meets the principle of inclusion and exclusion, (2) 49–51
Kim, J.H., Kim, Y.H. and Park, C.J., A modified Markov model for the estimation of computer software performance, (6) 253–257
Kim, Y.H., *see* Kim, J.H., (6) 253–257
Kleindorfer, G.B., Kochenberger, G.A., and Reutzel, E.T., Computing inter-site distances for routing and scheduling problems, (1) 31–33
Kochenberger, G.A., *see* Kleindorfer, G.B., (1) 31–33
Kochenberger, G.A. and Richard, V.H., A simple, all primal branch and bound approach to pure and mixed integer binary programs, (5) 182–185
Kulkarni, R., *see* Schruben, L.W., (2) 75–78

Lasdon, L.S. and Beck, P.O., Scaling nonlinear programs, (1) 6–9
Lasserre, J.B., An economic interpretation of exact penalty functions using sensitivity analysis, (1) 39–40
Lawler, E.L., A fully polynomial approximation scheme for the
